The Romans developed sophisticated methods for managing hygiene, including aqueducts for moving water from one place to another, sewers for removing used water from baths and runoff from walkways and roads, and public and private latrines. Through the archeological record, graffiti, sanitation-related paintings, and literature, Ann Olga Koloski-Ostrow explores this little-known world of bathrooms and sewers, offering unique insights into Roman sanitation, engineering, urban planning and development, hygiene, and public health. Focusing on the cities of Pompeii, Herculaneum, Ostia, and Rome, Koloski-Ostrow's work challenges common perceptions of Romans' social customs, beliefs about health, tolerance for filth in their cities, and attitudes toward privacy. In charting the complex history of sanitary customs from the late republic to the early empire, Koloski-Ostrow reveals the origins of waste removal technologies and their implications for urban health, past and present.

Roman Archaeology for Historians provides students of Roman history with a guide to the contribution of archaeology to the study of their subject. It discusses the issues with the use of material and textual evidence to explain the Roman past, and the importance of viewing this evidence in context. It also surveys the different approaches to the archaeological material of the period and examines key themes that have shaped Roman archaeology. At the heart of the book lies the question of how archaeological material can be interpreted and its relevance for the study of ancient history. It includes discussion of the study of landscape change, urban topography, the economy, the nature of cities, new approaches to skeletal evidence and artefacts in museums. Along the way, readers gain access to new findings and key sites - many of which have not been discussed in English before and many, for which, access may only be gained from technical reports. Roman Archaeology for Historians provides an accessible guide to the development of archaeology as a discipline and how the use of archaeological evidence of the Roman world can enrich the study of ancient history, while at the same time encouraging the integration of material evidence into the study of the period's history. This work is a key resource for students of ancient history, and for those studying the archaeology of the Roman period.

Classical archaeology was long equated to ancient art history. Today these fields find themselves at a major crossroads. The influence on them—from the discipline of anthropology—has increased substantially in the past 15 years, adding to the ways in which scholars can study the Roman past. The classical archaeologist of the 21st century is likely to be versed in Greek and Latin, computer technology, ancient history, great monuments, various hard sciences such as physics or even astronomy, GPS, GIS, surveying, mapping, digitizing, artistic rendering, numismatics, geo-science, astronomy, environmental studies, material culture analysis and/or a host of other disciplines and sub-disciplines.Universities are seeking specialists whose talents embrace not one but several different fields of research. It is not necessary for each scholar to know everything about each discipline being used within the fields of art history, classical archaeology and anthropology, but these days a basic knowledge of all relevant disciplines is becoming indispensable. This book will layout the basic information and steps necessary to take the beginning archaeologist's search for knowledge of the past and lead them to adventures of the future.

Kevin Greene shows how archaeology can help provide a more balanced view of the Roman economy by informing the classical historian about geographical areas and classes of society that received little attention from the largely aristocratic classical writers whose work survives.

Rome was the largest city in the ancient world. As the capital of the Roman Empire, it was clearly an exceptional city in terms of size, diversity and complexity. While the Colosseum, imperial palaces and Pantheon are among its most famous features, this volume explores Rome primarily as a city in which many thousands of men and women were born, lived and died. The thirty-one chapters by leading historians, classicists and archaeologists discuss issues ranging from the monuments and the games to the food and water supply, from policing and riots to domestic housing, from death and disease to pagan cults and the impact of Christianity. Richly illustrated, the volume introduces groundbreaking new research against the background of current debates and is designed as a readable survey accessible in particular to undergraduates and non-specialists.
