As OB progresses,
it can lead to
hyperinflation and
unilateral
hyperlucent lung
syndrome (cloudier
than normal lung
tissue) that can be
seen in imaging
studies.

Hyperlucent lung

File Type PDF

Bronchiolitis

Syndrome may be caused by the destruction of peripheral capillaries in the affected lung. Early in the infection, images will often show:

Obliterans –

Childhood

Interstitial Lung

File Type PDF

Bronchiolitis

Disease

Although the initial symptoms may sometimes mimic those seen from a lung infection, BOS is not due to infection. The main change seen with BOS is scarring of the small airways of transplanted lung(s). This scarring leads to

File Type PDF

Bronchiolitis

narrowing of the airways, limiting airflow with loss of lung function. Early after the onset of BOS, a person may not have any symptoms, but will develop breathlessness and chronic cough as BOS gets worse.
