Just press the AF point button with your thumb (the little round button, furthest to the right on the back of the 7D) and move the wheel to change your focus point. This allows you to continuously control your point of focus without losing momentum in your session.

Focus Points on the Canon 7D {and other models}

Thankfully, in all camera modes more advanced than 'Auto', you can select which AF points you want the camera to use (ie all of them, just some of them, or only a particular one). You'll either have a dedicated AF Point selection button (most Canon's do), or perhaps it's inside your menu (most Nikons it's under AF -> AF Area Mode) and honestly, for 95% of your photography, you're far better off setting it to ONLY USE THE CENTRE AUTO FOCUS POINT (single-point AF, and set to be the middle point).

Focus Points and AF Modes Explained | Chris Bray Photography

From reading the manual a while back I didn't think so. You certainly cannot with any Canon body I have ever used. I can do it: customize buttons then assign to the four direction buttons the function to move the focus point. He said "rear dial" so I took him to be talking about the rear dial and not the four direction buttons.

Using the dial to move focus points?: Canon EOS R Talk ...

Set an EdsPoint into kEdsPropID_Evf_ZoomPosition before triggering a focus command. The name "Zoom" is a bit confusing, but this property: Gets/sets the focus and zoom border position for live view. The focus and zoom border is set using EdsCameraRef, but obtained using live view image data, in other words, by using EdsEvfImageRef.

setfocus - Canon EDSDK set focus point - Stack Overflow

Move the magnified area. Use to move the magnified area into position for focusing. To center the magnified area, press straight in or press . Focus manually. While looking at the magnified image, turn the lens focusing ring to focus. After achieving focus, press the button to return to the normal view. Note.
