~~Many people who are car enthusiasts and are mechanically inclined dream of a career in automotive care and service. This work is essential and incredibly valuable since so few know how to do it. As the nation has again begun to embrace the opportunities offered by trade schools and vocational education, the time is again ripe to encourage mechanically skilled teens to pursue this career path. This guide describes the wide range of jobs and specializations in the field, including small and large engines, diesel, auto body repair, glass repair, and auto service managers. It also describes the skills, education, and training necessary, including the new computer skills required for increasingly high-tech diagnostic tools and cars and their operating systems. Helpful tips regarding job search and interview strategies, customer service, and lifelong learning and skills training are shared. This career guide also conforms to the career preparedness standards of the Common Core Curriculum regarding the reading of informational text.~~

~~The cars of today have different maintenance needs than the cars of the past. The cars of the future may have different needs entirely. No matter what, cars will need mechanics that know how to properly maintain and repair them. The young adults of today will be the job force of tomorrow, so choosing a career that will best fit with the needs of the changing world will be important to job satisfaction and a successful life. With the vast array of career and job options, it will also be important for young adults to understand which work will be the best match for their interests, talents, goals, and personality types. Certain careers are expected to gain importance within the early decades of the twenty-first century. In general, the number of job opportunities for mechanics is expected to increase slower than the average for all occupations. However, job opportunities are expected to be very good for mechanics that complete a training program and receive special certification to work on alternative fuel vehicles. There are already millions of alternative fuel vehicles driving on the roads today. As this number grows, the world will need more mechanics who know how to work on this new generation of "green" vehicles. Could you be one of them?~~

~~For those interested in cars, the author describes seven careers in detail (see table of contents), and devotes a few paragraphs to each of 15 others. Includes working conditions, places of employment, employment outlook, qualifications, training, tools, salaries, and advancement opportunities. Also has lists of automotive schools and sources of further information.~~

~~IF YOU LOVE CARS, LIKE WORKING with your hands, and have a knack for solving problems, becoming an automotive technician or mechanic is a great career option. Getting started requires less formal education than most other jobs, yet it has the potential to become a rewarding career. Auto technicians and mechanics keep vehicles on the road by providing routine maintenance and doing repairs to correct problems when they occur. On any given day, they could change oil and rotate tires, install alarms and sat-navs, use diagnostic equipment to identify a faulty component, replace worn brakes, adjust timing, rebuild a transmission, and road-test repaired vehicles. Auto technicians and mechanics both have the mechanical ability to work on vehicles. There is one key difference, however, and that is their technical expertise. Vehicles today are increasingly complex, with computers and electronics integrated into nearly every system. Auto technicians are specifically trained to work with computers and other technical aspects of vehicles. This training is important since computerized diagnostics tools have become standard equipment. Once training is complete, auto technicians are certified and earn the designation of "technician." While mechanics do not have the same formal technical training as technicians, there is often little difference in job duties. There are several ways to learn the necessary skills for this work, from an informal apprenticeship to earning an associate degree at a community college. Programs offered by vocational schools are the most popular. These typically last between six months and a year and offer a certificate upon completion. Though relatively short, these programs are intense and packed with a great deal of knowledge and hands-on experience. Regardless of the type and length of formal training, however, on-the-job training is usually needed after~~

graduation to qualify for the best jobs. Employers also prefer candidates with certification from the National Institute for Automotive Excellence. Certification is available in a number of areas, each focused on a specific automotive system, such as automatic transmissions, engine repair, or heating and air conditioning. Those who achieve certification in core areas can earn Master Technician status. Trained and skilled auto technicians and mechanics enjoy a high level of job security. This has become a high-tech career that is always in demand and cannot be outsourced overseas. The job outlook is very good because of a shortage of qualified candidates and the ever-growing love affair between Americans and their cars. Large car dealerships are always looking for good workers and that is where the largest percentage of jobs exists. There are also many jobs at independent repair shops that do general work on all kinds of vehicles, and franchise services that are dedicated to single systems like brakes or transmissions. There are plenty of other opportunities that are less obvious. Delivery services, municipal governments, public transportation departments, taxi companies, car and scooter rentals, and police departments all have fleets of vehicles that need regular service. Plus, there is always the opportunity for self-employment, which is common in this field. Once in the field, you will find success more quickly if you have strong problem-solving skills, pay attention to details, have excellent customer service skills, can work without supervision, and are physically fit. Even if you have no experience, you can start searching for a job today where you can learn the skills in a hands-on setting.
