Issues in Algorithm Design. Algorithms are mathematical objects (in contrast to the must more concrete notion of a computer program implemented in some programming language and executing on some machine). As such, we can reason about the properties of algorithms mathematically. When designing an algorithm there are two

The main characteristics of algorithms are as follows ? Algorithms must have a unique name. Algorithms should have explicitly defined set of inputs and outputs. Algorithms are well-ordered with unambiguous operations. Algorithms halt in a finite amount of time. Algorithms should not run for infinity, i.e., an algorithm must end at some point. Pseudocode
