Environmental tobacco smoke (ETS) as a harmful influence on the health of nonsmokers has been a controversial topic since the early 1980s. The International Conference on Indoor Air Quality held in Tokyo examined in great detail the relationship between passive smoking and lung cancer as revealed by a large cohort study. The participants were all highly qualified and experienced experts of world renown in their own fields of specialty. The deleterious effect of cigarette smoking on health is considered an established fact and as such has been used as a basic weapon in anti-smoking campaigns. There are, however, some questionable areas such as confronting variables, degree of correlation, the overall consistency of the data, and the problems of ETS measurement. Reports on other indoor pollution problems such as the presence of No₂, CO, and particulates in indoor air, together with the problem of indoor air pollution in the lesser-developed countries were also given. This collection of papers will contribute greatly to research into tobacco smoking epidemiology and assist in establishing a clear focus on an issue which has tended to become hopelessly obscured.

This beautiful book presents 60 of Claude Monet's original recipes alongside glorious reproductions of his paintings, scenes from his life in Giverny, and stunning photographs of the dishes. It's well known that Claude Monet was a gourmand as well as an artistic genius. His culinary journals are filled with detailed recipes and notes about what he ate and with whom he shared his meals. Now, sixty of those recipes are gathered in this elegantly produced book brimming with the colors and flavors of Giverny, France. Each chapter features recipes that were served in Monet's famed yellow dining room, eaten al fresco in the gardens at Giverny, or at several of the fine restaurants along the Seine in Normandy. Beautiful reproductions of Monet's art compliment the recipes, along with photographs of the artist enjoying these dishes with his family, friends, and fellow artists. The recipes themselves, selected for their rustic appeal and use of only the freshest ingredients, range from simple galettes and hearty casseroles to fine souffles, seafood dishes, and delicious tarts, cakes, and other pastries. A fitting tribute to the painter and his legendary aesthetic, this cookbook is the next best thing to sitting at Monet's table."

America's best-selling and best-loved guide to baby gear is back with an updated and revised edition! Yes, a baby book that actually answers the big question about having a baby: How am I going to afford all this? With the average cost of a baby topping \$7400 for just the first year alone, new parents need creative solutions and innovative ideas to navigate the consumer maze that confronts all parents-to-be. BabyBargains is the answer! Inside, you'll discover:

- BEST BET PICKS for cribs, car seats, strollers, high chairs, diapers and more!
- CHEAT SHEETS for your baby registry—create a baby registry in minutes with our good, better, best ideas.
- SEVEN THINGS no one tells you about baby gear, from nursery furniture to feeding baby.
- THE TRUTH ABOUT STROLLERS—and which brands work best in the real world.
- Dozens of SAFETY TIPS to keep baby safe and affordably baby proof your home.
- DETAILED CHARTS that compare brands of cribs, high chairs, car seats and more.

This new 13th edition adds the latest tips and advice on getting bargains on baby gear, including:

1. Streamlined recommendations by parenting lifestyle, from a crib for space-challenged urban parents to an affordable car seat for Grandma's car.
2. New recommendations for baby feeding, from baby food processors to storage ideas for home-made baby food.
3. BUDGET-FRIENDLY picks for dozens of items, from high chairs to infant car seats.
4. Expanded coverage of the price war on diapers—who's got the best deals now?

Lists types of wedding invitations available, and discusses the etiquette for using them

This textbook addresses the themes that are at the forefront of neonatal clinical care and research, based on natural divisions in care during pregnancy, and postnatally by gestational age at birth. The book offers a unique approach, in that it proposes discussion of important general principles underpinning neonatal care that are not addressed in most general neonatology textbooks, such as ethical issues, counselling, effective training methods, quality and safety, among other subjects. These are fundamental aspects and challenges that need to be appreciated by senior clinicians. A chapter authored by parents describing their perspectives of neonatal intensive care is unique and will be highly educational, with the

potential to influence the way in which individuals view and deliver neonatal care. The authors discuss common and important conditions, to promote adoption of sound evidenced based practice where this is available. However, where evidence is limited, as is the case in many areas of neonatal practice, the authors aim to encourage critical thinking and evidence appraisal, which are necessary skills for busy clinicians wishing to filter evidence to guide delivery of care. This text is suitable for senior trainees wishing to pursue a career in neonatal medicine, early career neonatologists and paediatricians with an interest in neonatology. It is also of interest to established neonatologists wishing to update their neonatal knowledge. The content is based on the RCPCH Level 3 curriculum, and addresses important topical and/or controversial aspects of neonatal care.

The art and secrets of making fermented sausages finally revealed. The majority of books written on making sausages do not tackle the subject of fermented sausages at all. The topic is limited to a statement that this is an advanced field of sausage making which is not recommended for an amateur sausage maker. Well, the main reason for writing this book was that the authors did not share this opinion. On the contrary, they believed that any hobbyist could make wonderful salami at home, if he only knew how. For thousands of years we have been making dry fermented sausages without any understanding of the process involved. Only in the past 60 years, sufficient advances were made in the field of meat science which explained the fermentation and drying of meats. Until then, the manufacturing process was shrouded in secrecy, and was more a combination of art and magic than a solid science. Highly technical papers were published in Food Technology journals, unfortunately these works were written in such difficult terms, that they were beyond the comprehension of the average sausage maker. Thus was born the idea of bridging the technology gap that existed between Meat Science and the requirements of the typical hobbyist making products at home. With more information obtainable every day, and commercial starter cultures available to the public, there is little reason to abstain from making quality salamis at home, regardless of the climate and outside conditions.

With bold design and colourful photographs, this series will engage even the most reluctant readers. A review page helps test children's learning in a fun and interactive way.

This book identifies key treatment challenges and unique care considerations in patients with head and neck cancers, providing a comprehensive guide to patient management that illustrates the critical importance of a multidisciplinary approach in achieving optimal oncological, functional, and survival outcomes. It covers all relevant specialties, including dental and oral medicine, medical oncology, radiation oncology, surgical oncology, and reconstructive surgery. It highlights the vital role played by ancillary head and neck cancer services, such as speech and swallowing therapy, occupational and physical therapy, and nutritional therapy in offering essential physical and psychological support from the time of diagnosis onward. The closing chapters address post-treatment issues, including those relating to survivorship, surveillance, and end-of-life care. Multidisciplinary care is perhaps even more important for patients with head and neck cancers than for other cancer patients, and in addressing all its aspects this book is invaluable for a wide range of practitioners.
