Data Governance How To Design

To ensure that data governance creates value fast, tailor governance priorities to the domain, and use iteration to adapt quickly. This goes beyond integrating governance with business needs, prioritizing use cases and domains, and applying needs-based governance; the key is to adopt iterative principles in day-to-day governance.

In this way, governance for data science can be easy to build, follow key laws and ethics regimes, and enable innovative models of collaboration. We provide an initial survey of structures and design patterns, as well as examples of how we leverage this approach to rapidly build out ethics-centered governance in biomedical research. While there is no one-size-fits-all solution, we argue for learning from ongoing data science collaborations and building on from existing standards and tools.
