Elements Of Partial Differential Equations. This text features numerous worked examples in its presentation of elements from the theory of partial differential equations. It emphasizes forms suitable for students and researchers whose interest lies in solving equations rather than in general theory.

Elements of Partial Differential Equations by Ian N. Sneddon

Partial Differential Equations (PDE) is a very large field of mathematics. Most of the problems originated in the characterization of fields occurring in classical and modern physics such as potential and wave equations associated with gravitation, electromagnetism, and quantum mechanics.

In mathematics, a partial differential equation (PDE) is an equation which imposes relations between the various partial derivatives of a multivariable function.. The function is often thought of as an "unknown" to be solved for, similarly to how x is thought of as an unknown number, to be solved for, in an algebraic equation like $x^2 - 3x + 2 = 0$

Partial Differential Equation (PDE for short) is an equation that contains the independent variables q, \dots, X_n , the dependent variable or the unknown function u and its partial derivatives up to some order. It has the form where F is

a given function and $u_{x_j} = \frac{\partial u}{\partial x_j}$, $u_{x_i x_j} = \frac{\partial^2 u}{\partial x_i \partial x_j}$, $i, j = 1, \dots, n$ are the partial derivatives of u .

where $\phi_1(x, y) = 0$ is the equation obtained by eliminating t from the equations $x = f_1(t)$, $y = f_2(t)$ and where $\phi_2(x, z) = 0$ is the one obtained by eliminating t between the pair $x = f_1(t)$, $z = f_3(t)$. A usual parameter t to take is the length of the curve measured from some fixed point.
