In order to minimize errors when building your financial models, be mindful of the following five basic steps: Clarify the business problem; Simplify as much as possible; Plan your structure; Build structural integrity; Test the model .

1. Clarify the business problem and intended goal. What problem is this financial model designed to solve? Who are the end users?

## Financial Modelling In

Nearly every financial modeling expert recommends a standard that isolates all of the model's hard-coded assumptions (things like revenue growth, WACC, operating margin, interest rates, etc...) in one clearly defined section of a model – typically on a dedicated tab called 'inputs.' These should never be commingled with the model's calculations (i.e. balance sheet schedules, the financial statements) or outputs (i.e. credit and financial ratios, charts and summary tables).

### Financial Modelling In

#### Practice A Concise Guide

Financial Director

As with all things complex, the first step to building a financial model (“model”) is to carefully layout a blueprint. Unplanned, unanticipated structural changes midway through a modeling exercise can be time-consuming, confusing, and error-prone, especially if the model’s adapter is not the same as its author.
