Sustainable development—meeting the world ’ s current needs by using what we already have, so that we ’ re not compromising the resources of future generations—has important implications for our environmental, economic, and social well-being. The good news is that most cultural heritage professionals, working to conserve buildings, ancient living sites, and the historic places that touch our hearts, do keenly recognize the significant relationship between conservation and sustainability.

Heritage And Sustainability

reframes the history of multiple movements within preservation and sustainable-design strategies into cross-disciplinary themes. Through topics such as Cultural Relationships with Nature, Ecology, Biodiversity, Energy, and Resource Systems; Integrating Biodiversity into the Built Environment Rehabilitation Practice; Fixing the Shortcomings Within Community Design, Planning, and Policy; Strategies for Adapting Buildings and Structures for Rising Sea Levels; and Vehicles as a Microcosm of Approaching Built Environment Rehabilitation, the book explores contemporary ecological and heritage ethics as a strategy for improving the livability of the built environment. The authors provide a holistic critique of the challenges we face in light of climate and cultural changes occurring from the local to the global level. It synthesizes the best practices offered by

Heritage And Sustainability

separate disciplines as one cohesive way forward toward sustainable design. The authors consider strategies for increasing the physical and cultural longevity of the built environment, why these two are so closely paired, and the potential their overlap offers for sustained and meaningful inhabitation. Sustainable Heritage unites students and professionals in a wide range of disciplines with one common language and more closely aligned sets of objectives for preservation and sustainable design.

This book explores cultural sustainability and its relationships to heritage from a wide interdisciplinary perspective. By examining the interactions between people and communities in the places where they live it exemplifies the diverse ways in which a people-centred heritage builds identities and supports individual and

Download File PDF

Heritage And Sustainability

collective memories. It encourages a view of heritage as a process that contributes through cultural sustainability to human well-being and socially- and culturally-sensitive policy. With theoretically-informed case studies from leading researchers, the book addresses both concepts and practice, in a range of places and contexts including landscape, townscape, museums, industrial sites, every day heritage, 'ordinary' places and the local scene, and even UNESCO-designated sites. The contributors, most of whom, like the editors, were members of the COST Action 'Investigating Cultural Sustainability', demonstrate in a cohesive way how the cultural values that people attach to place are enmeshed with issues of memory, identity and aspiration and how they therefore stand at the centre of sustainability discourse and practice. The cases are drawn from many parts of

Download File PDF

Heritage And Sustainability

Europe, but notably from the Baltic, and central and south-eastern Europe, regions with distinctive recent histories and cultural approaches and heritage discourses that offer less well-known but transferable insights. They all illustrate the contribution that dealing with the inheritance of the past can make to a full cultural engagement with sustainable development. The book provides an introductory framework to guide readers, and a concluding section that draws on the case studies to emphasise their transferability and specificity, and to outline the potential contribution of the examples to future research, practice and policy in cultural sustainability. This is a unique offering for postgraduate students, researchers and professionals interested in heritage management, governance and community participation and cultural sustainability.

For cultural and heritage institutions around the world, sustainability is the major challenge of the twenty-first century. In the first major work to analyze this critical issue, Barthel-Bouchier argues that programmatic commitments to sustainability arose both from direct environmental threats to tangible and intangible heritage, and from social and economic contradictions as heritage developed into a truly global organizational field. Drawing on extensive fieldwork and interviews over many years, as well as detailed coverage of primary documents and secondary literature, she examines key international organizations including UNESCO, ICOMOS, and the World Monuments Fund, and national trust organizations of Great Britain, the United States, and Australia, and many others. This wide-ranging study establishes

a foundation for critical analysis and programmatic advances as heritage professionals encounter the growing challenge of sustainability.

This volume looks at sustainable protection and sustainable use of cultural and natural heritage, particularly in view of the current challenges of the 21st century. For more than 40 years the World Heritage Convention has regulated the protection of the cultural and natural heritage of humankind, particularly in that heritage shall be protected if it is threatened by modern development. The international community has also adopted sustainability and sustainable development, as objectives to facilitate the protection of cultural and natural heritage. Sustainable heritage protection and use must therefore be preserved in the face of the global challenges it faces and must be

perceived in terms of societal, political and corresponding economic paradigms.

In 2015, the General Assembly of State Parties to the World Heritage Convention passed a ground-breaking Sustainable Development policy that seeks to bring the World Heritage system into line with the UN ' s sustainable development agenda (UNESCO 2015). World Heritage and Sustainable Development provides a broad overview of the process that brought about the new policy and the implications of its enactment. The book is divided into four parts. Part I puts the policy in its historical and theoretical context, and Part II offers an analysis of the four policy dimensions on which the policy is based – environmental sustainability, inclusive social development, inclusive economic development and the fostering of peace and security. Part III presents perspectives

from IUCN, ICOMOS and ICCROM – the three Advisory Bodies to the World Heritage Committee, and Part IV offers ‘ case study ’ perspectives on the practical implications of the policy.

Contributions come from a wide range of experienced heritage professionals and practitioners who offer both ‘ inside ’ perspectives on the evolution of the policy and ‘ outside ’ perspectives on its implications. Combined, they present and analyse the main ideas, debates and implications of the policy change. This book is key reading for all heritage professionals interested in developing a better understanding of the new Sustainable Development policy. It is also essential reading for scholars and students working in the area.

challenge of sustainability.

More than half of the world ' s population now live in urban areas, and cities provide the setting for contemporary challenges such as population growth, mass tourism and unequal access to socio-economic opportunities. Urban Heritage, Development and Sustainability examines the impact of these issues on urban heritage, considering innovative approaches to managing developmental pressures and focusing on how taking an ethical, inclusive and holistic approach to urban planning and heritage conservation may create a stronger basis for the sustainable growth of cities in the future. This volume is a timely analysis of current theories and practises in urban heritage, with particular reference to the conflict between, and potential reconciliation of, conservation and development goals. A

global range of case studies detail a number of distinct practical approaches to heritage on international, national and local scales. Chapters reveal the disjunctions between international frameworks and national implementation and assess how internationally agreed concepts can be misused to justify unsustainable practices or to further economic globalisation and political nationalism. The exclusion of many local communities from development policies, and the subsequent erosion of their cultural heritage, is also discussed, with the collection emphasising the importance of 'grass roots' heritage and exploring more inclusive and culturally responsive conservation strategies. Contributions from an international group of authors, including practitioners as well as leading academics, deliver a broad and balanced coverage of this topic. Addressing the

interests of both urban planners and heritage specialists, *Urban Heritage, Development and Sustainability* is an important addition to the field that will encourage further discourse.

Engineering

Heritage and Sustainable Urban

Transformations introduces the concept of ' deep cities ' , a novel approach to the understanding and management of sustainable historic cities that will advance knowledge about how the long-term, temporal and transformative character of urban heritage can be better integrated into urban policies for sustainable futures.

Contrary to the growing emphasis on green or smart cities, which focus only on the present and future, the concept of ' deep cities ' offers an approach that combines an in-depth understanding of the past with the present and future.

Bringing together chapters that cover

Download File PDF

Heritage And Sustainability

theoretical, methodological and management issues related to ‘ deep cities ’ , the volume argues that using this approach will force researchers, managers and consultants to actively use the heritage and history of a city in the planning and management of sustainable cities.

Exploring different definitions of ‘ deep cities ’ , the book reveals varying and sometimes conflicting views among stakeholders concerning how, where and when the depth of a city should be conceptualized. Despite this, the book demonstrates how this new approach can help to create robust cities for the future, as new and innovative solutions are combined with the preservation and strengthening of historical features.

great interest to academics and students engaged in the study of heritage, heritage management, architecture, heritage conservation, anthropology, development studies, geography, planning and archaeology.

This book serves as a drive and medium for constructive analysis, critical thinking, and informed change in the broad area of cultural heritage studies. In Africa, how to overturn the gory effects and reverse the wholesale obnoxious and unpardonable losses suffered from the excruciating experience of colonialism in a manner that empowers the present and future generations, remains a burning question. Colonial and liberation war heritage have received insignificant attention. The relevance, nature, and politics at play when it comes to the role of memory and colonial heritage in view of nation-building

Download File PDF

Heritage And Sustainability

and sustainability on the continent is yet to receive careful practical and theoretical attention and scrutiny from both heritage scholars and governments. Yet, colonial heritage has vast potentials that if harnessed could reverse the gargantuan losses of colonialism and promote sustainable development in Africa. The book critically reflects on the opportunities, constraints, and challenges of colonial heritage across Africa. It draws empirical evidence from its focus on Zimbabwe, South Africa, Nigeria, Ghana, Zambia, and Mozambique, to advance the thesis that cultural heritage in Africa, and in particular colonial heritage, faces challenges of epic proportions that require urgent attention.

Over the last three decades, historic housing areas have become one of the major concerns in urban regeneration,

Download File PDF

Heritage And Sustainability

housing renovation and conservation projects. Since the late 1990s, the notion of community, sustainability and sustainable community have become rising issues in the urban regeneration debate.

Regeneration, Heritage and Sustainable Communities in Turkey contributes to this debate by integrating the interplay between regeneration, community needs and sustainability in the context of Istanbul. Together with the relational, multi-scalar and contingency planning approaches, these vital agents of regeneration provide new possibilities and creative opportunities to successfully deal with the uncertainties and complexities in evolving regeneration spaces. The interdisciplinary text reasons that finding the balance between the needs, aspirations and concerns of local communities and the conservation of the built environments will lead to more equitable and sustainable
