High risk pregnancies, however, remain the remit of the obstetrician. Although an increasing proportion of this workload is being directed towards those with a dedicated interest in perinatal medicine, all obstetricians deal with a variety of maternal and fetal problems every day. We are also in the era of the randomised trial.

High Risk Pregnancy examines the full range of challenges in general obstetrics, medical complications of pregnancy, prenatal diagnosis, fetal disease, and management of labor and delivery. Drs. David James, Philip J. Steer, Carl P. Weiner, Bernard Gonik, Caroline Crowther, and Stephen Robson present an evidence-based approach to the available management options, equipping you with the most appropriate strategy for each patient. This comprehensive reference features the fully searchable text online at www.expertconsult.com, as well as more than 100 videos of imaging and monitoring. giving you easy access to the resources you need to manage high risk pregnancies. Prepare for clinical challenges and save time in addressing them thanks to expert advice on treatment options from international contributors. Find and apply the information you need quickly and easily through a consistent organization and at-a-glance summary boxes that discuss evidence-based management options. Access the fully searchable text online at www.expertconsult.com, along with links to Medline. View over 140 videos of detailed fetal imaging and monitoring that aid in diagnoses. Tap into recent developments in treatment

and management in four new chapters—Global Maternal & Perinatal Health Issues; Recurrent Pregnancy Loss; Surveillance of the Fetus and its Indications; and Training for Obstetric Emergencies. Apply new evidence-based management options to treat genetic and constitutional factors leading to a high-risk pregnancy (such as diabetes, obesity, hypertension, and cardiac disease) through new and expanded coverage of these increasingly common presentations. Reference pregnancy-relevant laboratory values with an updated and comprehensive appendix on "Normal Values in Pregnancy." Effectively manage patients newly diagnosed with hematologic and immunologic malignancies, and explore the available drug options. Confirm your diagnoses with greater confidence thanks to full-color images throughout the text.

For the maternal-fetal physician, constant vigilance throughout a pregnancy remains essential. But continuous change makes this an increasing challenge. Queenan's Management of High-Risk Pregnancy covers the full spectrum of perinatal care. Providing evidence, algorithms, and case studies, this book guides you through the tough and complex decisions needed to protect the health of both your fetal and the maternal patients. New material in the 6th edition covers contemporary issues such as, iron-deficient anemia, malaria, pregnancy in the disabled woman, placenta accrete, induction of labor, operative vaginal delivery, and patient safety in labor and delivery. Written by experts in the field, no obstetrician or obstetric health care provider can afford to miss Queenan's Management of High-Risk Pregnancy.

An international postgraduate textbook of obstetrics which aims to assist obstetricians - both in-training and trained - to manage problems and perform procedures. It covers problems associated with mother and foetus; provides background theory on clinical problems; and discusses management.

The only book of its kind, Manual of High Risk Pregnancy & Delivery provides a complete resource for care of this special patient and her complex needs. It helps you provide positive outcomes with coverage of today's newest technology, physiologic considerations, psychologic implications, health disorders, and other complications in pregnancy. Written by noted educator and practitioner Elizabeth Stepp Gilbert, RNC, MS, FNP-BC, CNS, this book also describes how to screen for risk factors, provide preventive management, and intervene appropriately when problems arise. It's a concise, hands-on reference for both inpatient and outpatient settings! A consistent format makes this book a practical, hands-on reference in the clinical setting, presenting problems with the following headings: incidence, etiology, physiology, pathophysiology, and medical management. Comprehensive coverage includes physiologic considerations, fetal assessment, perinatal screening, ethical and legal issues, health disorders during pregnancy, complications, and labor and delivery issues. Up-to-date content includes integrative therapy, domestic violence, multiple gestation, genetics, nutrition, culture, risk management, and all the latest screening tools. A section on ethical and legal considerations covers ethical decision making, legal issues, and risk management. Updated evidence-based content includes the latest AHWONN standards of practice. Patient safety and risk management strategies include updated approaches to improving outcomes, reducing complications, and increasing patient safety during high risk pregnancy and delivery. New Venous Thromboembolic Disease chapter provides current information on this increasingly common condition. Information on the latest assessment and monitoring devices keeps you current with today's technology. Standardized terminology and definitions from the National Institute of Child Health & Human Development (NICHD) lead to accurate and precise communication.

A practical textbook for clinicians seeking advice on either how to manage a patient or how to perform a procedure within maternal-foetal medicine. This third edition strengthens the evidence base of each chapter with a clear section on evidence supporting different management options.

Human Assisted Reproductive Technology: Future Trends in Laboratory and Clinical Practice offers a collection of concise, practical review articles on cutting-edge topics within reproductive medicine. Each article presents a balanced view of clinically relevant information and looks ahead to how practice will change over the next five years. The clinical section discusses advances in reproductive surgery and current use of robotic surgery for tubal reversal and removal of fibroids. It looks into the refinement of surgical procedures for fertility preservation purposes. Chapters also discuss non-invasive diagnosis of endometriosis with proteomics technology, new concepts in ovarian stimulation and in the management of polycystic ovary syndrome, and evidence-based ART. The embryology section discusses issues ranging from three-dimensional in-vitro ovarian follicle culture, and morphometric and proteomics analysis of embryos, to oocyte and embryo cryopreservation. This forward-looking volume of review articles is key reading for reproductive medicine physicians, gynecologists, reproductive endocrinologists, urologists and andrologists.

This book is a must-have for all health professionals involved in the care of women with high risk pregnancies. It is a concise and practical resource for all perinatal care and a reference for the diagnosis and management of high risk pregnancy. The fifth edition of this classic, focuses on factors affecting pregnancy, genetics, practical diagnostic techniques, maternal diseases in pregnancy and pregnancy complications, labor, anesthesia, and neonatal considerations. Dr Queenan is joined in the fifth edition by a new editor, Catherine Spong. The book will take an explicitly evidence-based approach this time around and will expand upon several important areas; genetics, doppler ultrasound, prevention, AIDS, group B streptococcus, preeclampsia, and prematurity.

More pregnancies are considered high-risk than ever before. As many as 30 percent fall into this category due to complicating factors that include:
