In Reid's biography, Courant is portrayed as a first class mathematician who was also an extremely effective facilitator who encouraged and supported emerging talent. In that respect, Hilbert was similar, but his achievements established him as one of the world's greatest mathematicians.

Hilbert 's interests had moved away from mathematical physics by this time and he did not take any more than a passing interest that Courant was writing the text. In 1925, with Friedrichs as his assistant, Courant began work on a second volume of Courant- Hilbert. By 1928 the new Mathematics Institute, begun the previous year, neared completion.

Hilbert's name is given to Infinite-Dimensional space, called Hilbert space, used as a conception for the mathematical analysis of the kinetic gas theory and the theory of radiations. Richard Courant (1888 - 1972) obtained his doctorate at the University of Göttingen in 1910.

Hilbert, the first of two children and only son of Otto and Maria Therese (Erdtmann) Hilbert, was born in the Province of Prussia, Kingdom of Prussia, either in Königsberg (according to Hilbert's own statement) or in Wehlau (known since 1946 as Znamensk) near Königsberg where his father worked at the time of his birth.

Hilbert 's work in geometry had the greatest influence in that area after Euclid. A systematic study of the axioms of Euclidean geometry led Hilbert to propose 21 such axioms and he analysed their significance. He made contributions in many areas of mathematics and physics. Courant & Hilbert is a classic applied math textbook, still in print nearly a century after the first edition came out. The actual title of the book is Methods of Mathematical Physics, but everyone calls it Courant & Hilbert after the authors, Richard Courant and David Hilbert. I was surprised to find out recently that this was once a banned book.

I have always felt that they belonged together, Courant being, as I have written, the natural and necessary sequel to Hilbert- the rest of the story. To make the two volumes more compatible when publish I am very pleased that my books about David Hilbert, published in 1970, and Richard Courant, published in 1976, are now being issued by Springer- Verlag in a single volume.

Courant received his secondary education in Germany and Switzerland and his doctorate from the University of Göttingen in 1910 under David Hilbert. For the next four years he taught mathematics at Göttingen. Then, at age 26, his teaching and research were interrupted by World War I.
