Steers buyers through the the confusion and anxiety of new and used vehicle purchases like no other car-and-truck book on the market. "Dr. Phil," along with George Iny and the Editors of the Automobile Protection Association, pull no punches.

INVESTING IS ONE OF THE FEW AREAS IN LIFE WHERE EVEN VERY SMART PEOPLE LET HOPE TRIUMPH OVER EXPERIENCE According to Wall Street Journal investing columnist Spencer Jakab, most of us have no idea how much money we're leaving on the table—or that the average saver doesn't come anywhere close to earning the "average" returns touted in those glossy brochures. We're handicapped not only by psychological biases and a fear of missing out, but by an industry with multimillion-dollar marketing budgets and an eye on its own bottom line, not yours. Unless you're very handy, you probably don't know how to fix your own car or give a family member a decent haircut. But most Americans are expected to be part-time fund managers. With a steady, livable pension check becoming a rarity, we've been entrusted with our own finances and, for

the most part, failed miserably. Since leaving his job as a top-rated stock analyst to become an investing columnist, Jakab has watched his readers—and his family, friends, and colleagues—make the same mistakes again and again. He set out to evaluate the typical advice people get, from the clearly risky to the seemingly safe, to figure out where it all goes wrong and how they could do much better. Blending entertaining stories with some surprising research, Jakab explains

- How a typical saver could have a retirement nest egg twice as large by being cheap and lazy.
- Why investors who put their savings with a high-performing mutual fund manager end up worse off than if they'd picked one who has struggled.
- The best way to cash in on your hunch that a recession is looming.
- How people who check their brokerage accounts frequently end up falling behind the market.
- Who isn't nearly as good at investing as the media would have you think.

He also explains why you should never trust a World Cup-predicting octopus, why you shouldn't invest in companies with an X or a Z in their names, and what to do if a time traveler offers you economic news from the future. Whatever your level of expertise, *Heads I Win, Tails I Win* can help you vastly improve your odds of investment success.

Both broad and deep in coverage, Rubenstein shows that fluid mechanics principles can be applied not only to blood circulation, but also to

air flow through the lungs, joint lubrication, intraocular fluid movement and renal transport. Each section initiates discussion with governing equations, derives the state equations and then shows examples of their usage. Clinical applications, extensive worked examples, and numerous end of chapter problems clearly show the applications of fluid mechanics to biomedical engineering situations. A section on experimental techniques provides a springboard for future research efforts in the subject area. Uses language and math that is appropriate and conducive for undergraduate learning, containing many worked examples and end of chapter problems All engineering concepts and equations are developed within a biological context Covers topics in the traditional biofluids curriculum, as well as addressing other systems in the body that can be described by biofluid mechanics principles, such as air flow through the lungs, joint lubrication, intraocular fluid movement, and renal transport Clinical applications are discussed throughout the book, providing practical applications for the concepts discussed.
