EB00K: Management Control Systems, 2e

First published in 1998, this volume of readings provides an overview of the development of the study of Management Control theory over the past 35 years. The period encompasses the publication of a major and seminal text by Anthony and Dearden in 1965, which acted as a touchstone in defining the range and scope of management control systems. This laid management control's foundations in accounting-based mechanisms of control, an element which has been seen as both a strength and a constraint. A good deal of work has followed, providing both a development of the tradition as well as a critique. In this volume we attempt to provide a range of readings which will illustrate the variety of possibilities that are available to researchers, scholars and practitioners in the area. The readings illustrate the view that sees control as goal directed and integrative. They go on to explore the idea of control as adaption, consider its relationship with social structure and survey the effects of the interplay between the organisation and the environment. The essays included are not intended to lead the reader through a well-ordered argument which concludes with a well reasoned view of how management control should be. Instead it seeks to illustrate the many questions which have been posed but not answered and

to open up agendas for future research.
