Power steering - Wikipedia

Fully electric power steering systems save about one mile per gallon, require less maintenance and are more reliable than a hydraulic system. Hydraulic Power Steering. This system uses pressurized power steering fluid, supplied by the power steering pump, to decrease steering effort. An engine-driven accessory drive or serpentine belt turns on the pump and directs high-pressure power steering fluid via the high-pressure hose to the input side of the power

A power-steering system should assist the driver only when he is exerting force on the steering wheel (such as when starting a turn). When the driver is not exerting force (such as when driving in a straight line), the system shouldn't provide any assist. The device that senses the force on the steering wheel is called the rotary valve.
