This book is about the gender dimensions of natural resource exploitation and management, with a focus on Asia. It explores the uneasy negotiations between theory, policy and practice that are often evident within the realm of gender, environment and natural resource management, especially where gender is understood as a political, negotiated and contested element of social relationships. It offers a critical feminist perspective on gender relations and natural resource

management in the context of contemporary policy concerns: decentralized governance, the elimination of poverty and the mainstreaming of gender. Through a combination of strong conceptual argument and empirical material from a variety of political economic and ecological contexts (including Cambodia, China, Indonesia, Malaysia, Nepal, Thailand and Vietnam), the book examines gender-environment linkages within shifting configurations of resource access and control. The book will serve as a core resource for students of gender studies and natural resource management, and as supplementary reading for a wide range of disciplines including geography, environmental studies, sociology and development. It also provides a stimulating collection of ideas for professionals looking to incorporate gender issues within

This volume focuses on the political economy surrounding the detailed decisions that governments make at each step of the value chain for natural resource management. From the perspective of public interest or good governance, many resource-dependent developing countries pursue apparently short-sighted and sub-optimal policies in relation to the extraction and capture of resource rents, and to spending and savings from their resource endowments. This work contextualizes these micro-level choices and outcomes.

This book documents a decade of research, methodological innovation, and lessons learned in an eco-regional research-for-development program operating in the eastern African highlands, the African Highlands Initiative (AHI). It does this through reflections of the protagonists themselves—AHI site teams and partners applying action research to development innovation as a means to enhance the impact of their research. The book summarizes the experiences of farmers, research and development workers and policy and decision-makers who have interacted within an innovation system with the common goal of implementing an integrated approach to natural resource management (NRM) in the humid highlands. This book demonstrates the crucial importance of "approach"

in shaping the outcomes of research and development, and distils lessons learned on what works, where and why. It is enriched with examples and case studies from five benchmark sites in Ethiopia, Uganda, Kenya and Tanzania, whose variability provides the reader with an in-depth knowledge of the complexities of integrated NRM in agro-ecosystems that play an important role in the rural economy of the region. It is shown that the struggle to achieve sustainable agricultural development in challenging environments is a complex one, and can only be effectively achieved through combined efforts and commitment of individuals and institutions with complementary roles.

As Thomas Sterner points out, the economic 'toolkit' for

dealing with environmental problems has become formidable. It includes taxes, charges, permits, deposit-refund systems, labeling, and other information disclosure mechanisms. Though not all these devices are widely used, empirical application has started within some sectors, and we are beginning to see the first systematic efforts at an advanced policy design that takes due account of market-based incentives. Sterner's book encourages more widespread and careful use of economic policy instruments. Intended primarily for application in developing and transitional countries, the book compares the accumulated experiences of the use of economic policy instruments in the U.S. and Europe, as well as in select rich and poor countries in Asia, Africa, and Latin America. Ambitious in scope, the book discusses the design

contexts, including transportation, industrial pollution, water pricing, waste, fisheries, forests, and agriculture. Policy Instruments for Environmental and Natural Resource Management is deeply rooted in economics but also informed by perspectives drawn from political, legal, ecological, and psychological research. Sterner notes that, in addition to meeting requirements for efficiency, the selection and design of policy instruments must satisfy criteria involving equity and political acceptability. He is careful to distinguish between the well-designed plans of policymakers and the resulting behavior of society. Including both theoretical and empirical chapters, the contributors explore how global organisations and organisational networks can collaborate with stakeholders within their community to leverage their HRM strategies.

This work evaluates the merits of a widely-used approach to natural resource management, participatory action research (PAR), an approach to resource management that strives to link researchers with farmers and other local residents whose lives are effected by long-range conservation programmes. The authors begin the book with the history of PAR, and then

use a variety of case studies that chronicle sustainable development efforts in Brazil. They evaluate the strengths and weaknesses of these efforts and suggest specific ways to improve on future PAR efforts.

The essential book for developing and learning about European HR practice.

'This is a comprehensive and thought provoking book, as instead of attempting to provide simplistic and prescriptive "toolbox" notions of HRM practice, the author draws attention to the current state of research and varying organizational experiences of HRM to illustrate the complexity of the issues'

the clear need for a substantial but accessible introduction to the practice of human resource management (HRM) within the context of relevant theory and current debates. In a discussion that ranges from the strategic and policy aspects of HRM to the day-to-day processes of employee management, the author identifies and explores key concepts and skills. Distinctive features of the book include: a focus on issues of direct relevance to all line managers, not just to human resource specialists; a combination of a knowledge-based approach with a practical introduction to the most important skills; numerous examples, encapsulating concepts and techniques in clear tables, and a teaching appendix of discussion questions; and a broad international perspective, drawing on case material from Europe, the United States and
