# Download Free Sheet Metal Operations Cutting And

Sheet metal cutting is a major classification for many different pressworking operations. Cutting operations involve the separation of the metal of the sheet in certain areas. This separation is caused by shearing forces acting on the metal through the edges of

which material is removed from a piece of sheet metal by applying a great enough shearing force.

Punching is very similar to blanking except that the removed material, called the slug, is scrap and leaves behind the desired internal feature in the sheet, such

Discuss all sheet metal operations with diagrams.

Sheet metal is metal formed by an industrial process into thin, flat pieces. Sheet metal is one of the fundamental forms used in metalworking, and it can be cut and bent into a variety of shapes.

Typically, sheets of metal are sold as flat, rectangular sheets of standard size. Therefore the first step in any sheet metal process is to cut the correct shape and sized 'blank' from larger sheet.
