Welcome to the "Coastal Shell Middens and Agricultural Origins in Atlantic Europe" research project website, here at the University of York! The role of the rich coastal and marine biotopes of Atlantic Europe in sustaining relatively dense Mesolithic populations and thereby facilitating, delaying, or otherwise moderating the introduction of prehistoric farming into Atlantic Europe has been the focus of a long-standing and unresolved debate.

**Shell midden research in Atlantic Europe: State of the art ...**

Until recently, European Atlantic shell middens attracted only sporadic interest from archaeologists and scientists. However, there has been a notable resurgence in the excavations of shell middens over the last few decades which has been accompanied by the development of a range of new scientific methods applicable to shells and other midden components.

**Shell Middens in Atlantic Europe - Oxbow Books**

We have successfully extended methods of seasonality and age-structure analysis, originally pioneered on the oyster remains in the Mesolithic and Neolithic deposits of the Danish shell- midden site of Norsminde, to other species (particularly the common cockle, *Cerastoderma edule*), and to other sites, in particular the Danish shell mounds of Krabbesholm and Bjørnsholm (both of which have substantial Neolithic shell-midden deposits as well as Mesolithic deposits).

I have been interested in coastal archaeology, shell middens, the Mesolithic, and the transition to agriculture for the last 10 years. During my PhD, I pioneered a method for ascertaining the seasonality and age of the European oyster, *Ostrea edulis*, which I applied to case-studies from Danish shellmiddens.
