This book reflects on how the economies, social characteristics, ways of life and global relationships of rural areas of Europe have changed in recent years. This reveals a need to refresh the concepts we use to understand, measure and describe rural communities and their development potential. This book argues that Europe has 'outgrown' many of the stereotypes usually associated with it, with substantial implications for European Rural Policy. Rural structural change and its evolving geography are portrayed through regional typologies and the concept of the New Rural Economy. Demographic change, migration, business networks and agricultural restructuring are each explored in greater detail. Implications for equality and social exclusion, and recent developments in the field of governance are also considered. Despite being a subject of active debate, interventions in the fields of rural and regional development have failed to adapt to changing realities and have become increasingly polarized. This book argues that rural/regional policy needs to evolve in order to address the current complex reality, partially reformulating territorial or place-based approaches, and the New Rural Paradigm, following a set of principles termed "Rural Cohesion Policy".

This book reflects on how the economies, social characteristics, ways of life and global relationships of rural areas of Europe have changed in recent years. This reveals a need to refresh the concepts we use to understand, measure and describe rural communities and their development potential. This book argues that Europe has 'outgrown' many of the stereotypes usually associated with it, with substantial implications for European Rural Policy. Rural structural change and its evolving geography are portrayed through regional typologies and the concept of the New Rural Economy. Demographic change, migration, business networks and agricultural restructuring are each explored in greater detail. Implications for equality and social exclusion, and recent developments in the field of governance are also considered. Despite being a subject of active debate, interventions in the fields of rural and regional development have failed to adapt to changing realities and have become increasingly polarized. This book argues that rural/regional policy needs to evolve in order to address the current complex reality, partially reformulating territorial or place-based approaches, and the New Rural Paradigm, following a set of principles termed "Rural Cohesion Policy".

EU common regional policy seeks to reduce regional disparities and prevent further social and economic imbalances by transferring Community resources to regions undergoing problems using the Structural Funds. This study seeks to provide technical advice to the Committee of the Regions on this matter, based on a literature review of regional development issues and on official EU documents, such as periodic reports, statistical yearbooks and cohesion reports. It examines the major socio-economic challenges to regional cohesion in the EU-15, considers the impact of enlargement, and makes recommendations for a more balanced regional development policy.

"Territorial cohesion" strives for a more balanced spatial development and seeks to improve integration throughout the EU. The scientific articles in this volume examine the interpretations of this term, the challenges of European spatial development policy, and the problems and concepts involved in achieving territorial cohesion. Two short reports illustrate the implementation of territorial cohesion on the basis of two research projects.

This book offers a comprehensive overview of several urban related aspects that are of central importance to successful territorial cohesion processes. In essence, it sheds new light on issues concerning urban polycentrism, functional urban regions, integrated sustainable urban development, and the EU Urban Agenda; and on how they can help to achieve territorial cohesion policy goals. As an elusive and fairly recent concept, territorial cohesion has to date only been vaguely debated in the available literature, which for the most part focuses on its historical origins and its relevance for EU policymaking. Instead, this book synthesizes, for the first time, a range of perspectives that place urban elements and policies at the core of territorial cohesion analysis. As such, and given the fact that territorial cohesion is a holistic concept, the book will appeal to a broad readership from both the academic and policymaking arenas.

Recoge: 1. Economic, social and territorial situation and trends - 2. National policies and cohesion - 3. Other European Union policies and cohesion - 4. Impact of Cohesion Policy.

Despite the emphasis of the European Regional Policy on territorial cohesion, regional disparities have been increasing within Europe in the past years. The metropolitan areas in almost all countries are considerably growing while regions outside of agglomerations are stagnating or even declining. Against this background this book aims to provide an understanding of the underlying processes of polarisation and related regional and local policies. This open access volume contributes to the debates about polarisation and regional development by focussing on questions of spatial justice, power distribution and policy transfer. Theoretical and empirically grounded contributions show that European policies are indeed reproducing socio-spatial inequalities instead of challenging them. The book shows further the existing potentials and limits of individuals, economic, political and civil society actors to respond to polarisation on the regional and local level. In this book conceptual thoughts on polarisation, regional policy and regional development are combined with empirical research and resulting implications for policymaking. As such, it is a valuable source for early career students and researchers as well as professionals in the field of regional and economic development, policy consultants, and policy makers.

European societies and economies continue to rely on Services of General Interest (SGI) to produce legitimacy. Fair access to basic services such as transport, energy and communication infrastructures, education and health care is regarded as a cornerstone of the "European Model of Society", as a way to promote Territorial Cohesion and lastly, as a right held by every EU citizen. These collective, regional and individual perspectives on Services of General Interest are in the focus of this edited volume. In the light of postmodern societies, demographic aging, migratory patterns, globalization and economic crises territorially sensitive challenges arise and targeted solutions are needed accordingly.
