Discusses various types of parasites that lives on or in the bodies of other animals, including mites, lice, fleas, ticks, and tapeworms.

Everything you ever wanted to know about parasites but were too horrified to ask In What's Eating You? Eugene Kaplan recounts the true and harrowing tales of his adventures with parasites, and in the process introduces readers to the intimately interwoven lives of host and parasite. Kaplan has spent his life traveling the globe exploring oceans and jungles, and incidentally acquiring parasites in his gut. Here, he leads readers on an unforgettable journey into the bizarre yet oddly beautiful world of parasites. In a narrative that is by turns frightening, disgusting, and laugh-out-loud funny, Kaplan describes how drinking contaminated water can cause a three-foot-long worm to burst from your arm; how he "gave birth" to a parasite the size and thickness of a pencil while working in Israel; why you should never wave a dead snake in front of your privates; and why fleas are attracted to his wife. Kaplan tells stories about leeches feasting on soldiers in Vietnam; sea cucumbers with teeth in their anuses that seem to encourage the entry of symbiotic fish; the habits of parasites that cause dysentery, river blindness, and other horrifying diseases—and much, much more. Along the way, he explains the underlying science, including parasite evolution and host-parasite physiology. Informative, frequently lurid, and hugely entertaining, this beautifully illustrated book is a must-read for health-conscious travelers, and anyone who has ever wondered if they picked up a tapeworm from that last sushi dinner.

Life is eating you up and spitting you out. The apex predators are everywhere. The pressure is rising. Can you cope? Predatory capitalism is consuming you from the outside, while your personal demons are eating you from the inside. Will they meet in the middle? Nietzsche said, "In loneliness, the lonely one eats himself; in a crowd, the many eat him. Now choose." What's it to be? Will you devour life, or will you allow it to devour you? You need to get on top of the game, ahead of the game. Only the best players can level up. What kind of player are you?

Parasites: Natural Ways To Get Rid of What's Eating You Inside. Non-Toxic Recipes Only! It may not be pleasant dinner conversation, but all the studies show that approximately half the human population are absolutely riddled with parasites. Don't get me wrong, this doesn't necessarily mean that half the world is going around with 10-foot tape worms inside them, but there are a whole lot of people that have much less noticeable parasites tagging along for the ride. These parasites may be mild in comparison, but they are detrimental to long term health nonetheless. No matter their shape or form, parasites can rob your body of nutrition and thereby adversely affect just about every process of the body. In order to get rid of them, or prevent their occurrence in the first place, we need to cleanse ourselves and gird our system with a diet free of toxins. This can be done with special detoxifying recipes that emphasize ingredients that naturally get rid of toxins and ward off most harmful parasites. This book will teach you how to: Prepare recipes Cleanse your body Gird yourself against Parasites And a whole lot more!

Are you having difficulty shaking an illness? Have you been feeling chronically tired and listless? Do you have a health problem your doctor can't identify? The cause may be parasites in your body. If you think that parasitic diseases happen only to people in Third World Countries, think again. The rate of parasite-related disorders in North American is skyrocketing. In this completely revised and updated edition of the most authoritative book on the subject for consumers, renowned nutritionist Ann Louise Gittleman gives the information you need to know to ward off unwelcome organisms. Guess What Came to Dinner? explains what parasites are, why they are harmful, and how they are spread. Most importantly, she offers tips on creating a parasite-proof diet and lifestyle. What Came to Dinner? is the indispensable guide to protecting yourself and your loved ones from this hidden epidemic.

The evolution and life history of parasites, their role in shaping human history, as well as future threats posed by them.

Explores the horrific side of consumption, as it is portrayed in film and television—from what (and whom) we eat to food that "bites back."

Parasites are some of the nastiest creatures on earth. They will do anything to survive, including pirating nutrients and using mind control. Follicle mites feast on human skin cells. The corpse flower steals its host's DNA and the stickleback tapeworm tricks its host into becoming dinner. Parasites have adapted to every environment on earth and in the sea, but are these tiny creatures nature's monsters or do they play an important role in our ecosystem? Through intriguing photographs and accessible text, readers will dig into the science of parasites and explore how these creatures shape history.

Through illustrated full-color images, unravels the mystery of how we bring to life creatures that no one has ever seen before.

Presents a collection of trivia about the parasites that are living in, crawling on, and attacking the human body.
