~~XVA: Credit, Funding and Capital Valuation Adjustments London~~

Valuation adjustments (XVAs) Valuation adjustment is the umbrella name for adjustments made to the fair value of a derivatives contract to take into account funding, credit risk and regulatory capital costs. Dealers typically incorporate the costs associated with XVA s into the price of a new trade. The oldest XVA is the credit valuation adjustment (CVA), which reflects the cost of hedging a client’s counterparty credit risk over the life of the trade.

~~Valuation adjustments (XVAs) definition – Risk.net~~

intertwining of the FVA and economic capital, which leads to a significantly lower FVA as a result of the fungibility of economic capital (on top of reserve capital) as a source of funding for variation margin. The alternative MVA formula (30) shows how a specialist initial margin lending scheme may drastically reduce the funding

Banks are required to hold capital reserves in order to survive large unexpected credit, market or operational risk losses. The introduction of Basel III, following the GFC, has substantially increased the capital required by banks for holding derivative contracts. XVA captures the cost of this additional regulatory capital.
